

# ADMIN TRAINING GUIDE

System administration — users, permissions, integrations & automation

Role: Administrator | Audience: System admins & IT leads | Version: 2026

## Section 1: Role Permissions Matrix

Each role has predefined access. Admins can add or revoke permissions from Settings > Users:

| Permission              | Recruiter | Lead | KAE | KAM | Admin |
|-------------------------|-----------|------|-----|-----|-------|
| Add Candidates          | Yes       | Yes  | No  | No  | Yes   |
| Edit Candidates         | Own only  | Team | No  | No  | Yes   |
| View All Candidates     | No        | Yes  | Yes | Yes | Yes   |
| Create Job Postings     | No        | No   | Yes | Yes | Yes   |
| Submit to Client        | No        | Yes  | Yes | Yes | Yes   |
| View Reports            | No        | Team | Own | All | All   |
| Manage Users            | No        | No   | No  | No  | Yes   |
| Configure Automation    | No        | No   | No  | No  | Yes   |
| View Finance            | No        | No   | No  | Yes | Yes   |
| WhatsApp / Integrations | No        | No   | No  | No  | Yes   |

## Section 2: WhatsApp Integration Setup

| Step | Action                                                                                                                                        | Where                           |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| 1    | Go to Settings > Integrations > WhatsApp                                                                                                      | Admin panel                     |
| 2    | Enter WhatsApp Business API Token                                                                                                             | From Meta Business Manager      |
| 3    | Enter Phone Number ID                                                                                                                         | From Meta developer dashboard   |
| 4    | Enter Verify Token (create your own secret)                                                                                                   | Settings form                   |
| 5    | Save and click Test Connection                                                                                                                | Settings form                   |
| 6    | Set webhook URL in Meta to: <a href="https://ats.aviinjobs.com/api/v1/whatsapp/webhook">https://ats.aviinjobs.com/api/v1/whatsapp/webhook</a> | Meta dashboard                  |
| 7    | Verify the webhook handshake succeeds                                                                                                         | Meta dashboard shows green tick |

## Section 3: Daily Automation Schedule

| Time  | Job Name          | What It Does                               |
|-------|-------------------|--------------------------------------------|
| 01:00 | Process Recurring | Generate invoices from recurring templates |
| 06:00 | SLA Checker       | Flag SLA breaches, send Copilot alerts     |
| 08:00 | AI Score Refresh  | Re-score candidates against active jobs    |
| 09:00 | WhatsApp Summary  | Send daily pipeline summary to KAMs        |
| 12:00 | Auto-Screen Run   | Apply automation rules to new candidates   |

|       |                     |                                             |
|-------|---------------------|---------------------------------------------|
| 18:00 | Follow-up Reminders | Send reminders for stale pipeline entries   |
| 23:00 | Report Generation   | Build end-of-day placement & revenue report |
